CONSULTANCY

We put our versatility at your service

A2 CAPITAL is a new consultancy project aimed at the internationalization of companies, whose main objective is to increase their competitiveness abroad, and provide them with a comprehensive customized service, which will help them grow and increase your productivity.

Our team of professionals with a long career in their respective departments, is highly customer oriented and develops its activity in the most attractive markets in Latin America, the Middle East and Asia.

We work with new systems of international commercialization of products that allow in many cases to increase the commercial margins and reduce considerably the structure costs.

Own legal office

International operations require in-depth knowledge of those legal and fiscal aspects that could affect the property acquired, even more so in the case of customers of other nationalities, given that Spanish legislation on

real estate has many peculiarities that do not occur in other countries.

In A2 we have our own legal office specialized in the real estate and investor sector, essential for the operations to be executed correctly avoiding legal and fiscal problems, and simplifying the work of our partners and clients.

Accounting department

Our administrative department keeps a constant monitoring of all the operations, informing our partners and clients promptly of all the parameters to be followed and resolving all their doubts instantly, thus facilitating decision-making.

MISSION

To be a consultancy firm, training and services for companies, with the purpose of increasing their global competitiveness, involving us in their project.

VISION

Become a leading company, both in the advice, and in the execution of the plan for the opening and expansion of markets, getting help to realize your objectives.

Let us be your eyes abroad

When a company decides that it is the right time to grow and expand beyond its borders, it is always necessary to carry out a prior analysis of the situation and the map of opportunities. Therefore, a foreign trade consultancy is always the best resource because, among other things, it knows the best options according to the type of company thanks to previous projects and also has a network of contacts in different points.

A2CAPITAL is a foreign trade agency that turns opportunities into realities, allowing clients to get the most out of their competitive advantages. A fact that makes the challenge a success in new markets.

The implementation abroad can become a long and cumbersome process of research in different areas, leading to the need for knowledge, time and energy.

We propose that in the process of internationalization leave in the hands of our experts everything that is not your core business.

Our methodology ensures the integration of the project and its success. Outsourcing services are guaranteed by our total involvement.

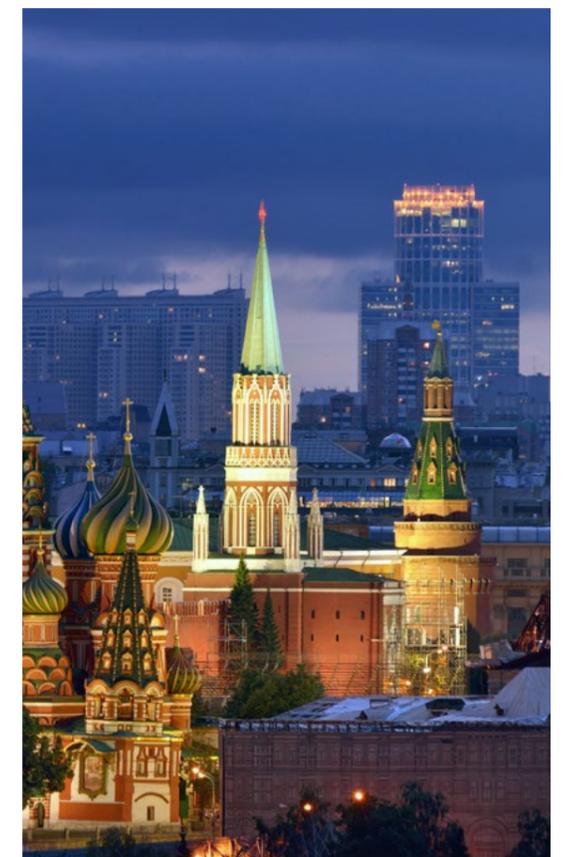

The A2CAPITAL team of consultants is responsible for analyzing the established challenges and define the actions to be carried out for a correct expansion of the business. As a foreign trade agency, we stand with our clients and help them access new markets, meet and manage investors and visualize business opportunities. We are a consultancy in foreign trade that we are next to our clients in a moment as important as international development.

At A2 Capital we help you to make the most correct decision for your implementation abroad and carry out its execution, be it from the agency, the distribution or purchase, to the opening of your own subsidiary, keeping in at all times the management control of the activity in the destination country.

Our extensive network of professionals around the world, will provide everything you need abroad from the operational aspect, legal, fiscal or economic.

Our job is to devise and create to give value to brands and increase the patrimony of our clients. And we have it very clear: every success brings us new clients. It makes us better. It makes us grow.

Implementation abroad: legal establishment and management control

- We analyze and advise on the most convenient way of implementation. From hiring a local employee to the establishment of a subsidiary, or acquisition business, through the hiring of an agent, distributor, contract Joint Venture, or opening of an office of representation.
- We determine the optimal way to obtain in the country of origin the cash generated in the destination country. We analyze and propose the economic and monetary relationship between the parent company and the activity in the destination country.
- We execute the necessary steps for the opening of the subsidiary, or we establish contractually the necessary legal relationship with your resource in the destination country.
- We establish the back office processes in the subsidiary.
- We determine and design the reporting financially useful for the matrix that allows control over the activity developed in the destination country.

Management control for the set of International subsidiaries

- We make compatible the chart of accounts and the structure to be used in the destination country with what is necessary in the country of origin.
- We design a reporting system, homogeneous for all the subsidiaries and the parent company, that provides added value in

decision making.

- We implement budget control for the subsidiaries.
- We analyze the exchange rate differences in transactions between subsidiaries and / or parent. We propose the coverage of the exchange risk.
- We analyze the transfer prices between subsidiaries and matrix, and through a study We can propose those transfer prices and documentation necessary for compliance with current legislation.
- We design compliance management all fiscal, mercantile, labor and accounting obligations of the subsidiaries.
- Internal Audit for the subsidiary.
- Contracts intercompany (parent-subsidiary). Analysis of the monetary economic relationship between matrix and subsidiary for the correct repatriation of the resources generated in the destination country.

System of reporting and management in the matrix: transformation of the mercantile accounting in management accounting

- We design, according to the requirements of the company, a reporting system that involves the passage from a commercial accounting to a management accounting. Helping the company to focus on the analysis according to cost centers, lines of business and any another variable that is significant for the taking of decisions.
- We propose a methodology for the preparation of the annual budget and its

monthly monitoring, according to reporting designed and established departments or cost centers.

- Adaptation of accounting: IFRS versus International GAAPs that may exist in different countries in which you can have subsidiaries.

Business plan for the project and financial plan for the subsidiary

- We perform a business plan for the implementation project abroad, or the parent company itself if required.
- We project a financial plan for the subsidiary. The objective is to know which cash is needed the subsidiary in the first years of its activity and how it can be financed, or can be the mechanisms of repatriation of the cash generated by this activity in the destination country.

Study of the certifications and regulations that affect the product or service, the tariffs of customs

- Study of the certifications and regulations that affect the product or service, the

customs tariffs, and in general any type of tax, legal, information study market or logistics that can help in the process of external implementation.

- We coordinate with local advisors to find out how compliance can affect the sale of a product or service of certifications or regulations, know tariffs to be paid at customs, or any type of tax, legal, market or logistics needed to make decisions in the implementation.

Personal recruitment in country destination. Expatriation, obtaining of visas and work permits

- We work with local consultants for the hiring of employees in the destination country, whether local or expatriate, or obtaining visas and work permits for displaced persons.

Search for agents and distributors

- At A2 CAPITAL we accompany you in the selection and hiring of agents or distributors to be able to sell in the foreign market.

OPERATING SUMMARY

1. MARKET STUDY, DEFINING THE BEST MARKETS AND THEIR CHARACTERISTICS.
2. IDENTIFY ENTRY BARRIERS (TOGETHER WITH OUR PARTNERS AND COLLABORATORS, WE CAN GIVE A GLOBAL VISION OF THE PROJECT AT A LEGAL, STRUCTURE, FINANCIAL, LOGISTIC ...).
3. STRATEGIC ENTRY PLAN BY COUNTRY, DEFINING THE

BRAND PORTFOLIO, PRODUCT, PRICE STRATEGY...

4. IMPLEMENTATION PLAN AND ROADMAP DELIVERABLES.
5. DEFINE THE OPERATIONS AND THE RELATIONSHIP BETWEEN THE NEW MARKET AND THE MAIN MARKET (CUSTOMER SERVICE, PRESENCE CHANNELS ...).
6. OPTIMIZATION OF GROWTH AND CONSOLIDATION OF ECONOMIES OF SCALE AND LOCAL ECONOMY.

Making the decision of where to settle can be a subjective and polarized process, affected by bureaucracy and by stereotypes and perceptions far from reality. We can help your company to accelerate this process in a professional, structured and efficient way, helping you reduce risks and optimize your time.

STRATEGIC ADVICE

We can help you collect, sort and understand all the practical and contextual information you need to make your location decisions in investment projects. Let us help you understand, evaluate and compare the different options available, identifying the most appropriate location for your project, based on an exhaustive analysis of your needs and the existing offer.

PROJECT MANAGEMENT

We offer support during all phases of the investment project, helping you to optimize your time and ensuring a smooth settlement process, avoiding unnecessary risks and costs.

FINANCING AND INCENTIVES

We collaborate with our clients in the design of the financial structure more competitive and the elimination of risks. Let us help you evaluate and make the most of the existing incentive plans in the different possible locations and optimize the use of the different alternatives of financing available for their projects, as well as to request them and ensure their benefits.

CORPORATE

In some cases, the optimal establishment alternative in a new location may not be a greenfield operation, either by company policy, by local conditions or by the existence of difficult opportunities to ignore. We can advise you on your business investment decisions, offering support and intermediation services and facilitation for M & A operations.

Investment consultant for hotels, hospitals and nursing homes

The strategic consultancy is intended for investors with interests in the hotel sector who need experts to evaluate and make specific decisions on the investment and management of hotel assets that they hold in their portfolio, or that they intend to incorporate into their portfolio of assets. An adequate strategy and planning of a portfolio of hotel assets ordered, diversified and properly managed, is a guarantee of excellent returns on investment.

The value of a hotel asset is subject to the management carried out in it. The positioning of our assets in the market is directly related to the effectiveness of its management. Currently there very specialized managers, but this is not a guarantee of an appropriate management, therefore its control and analysis are fundamental to ensure that we are obtaining the adequate profitability of our assets.

An investment in the hotel sector requires an in-depth analysis of many factors that in the future will affect the development of the project, and that should be foreseen with the enough anticipation for a take appropriate decisions.

All these elements will guarantee a profitability according to the investment made.

A2Capital is composed of highly educated and proven professionals experience in the financial sector. The capital of the firm is distributed among its partners, This aspect reinforces the free nature of investment recommendations to customers, there is no conflict of interest.

Our work is focused on the management of your financial assets according to your investment objectives, time horizon and profile risky. We offer you the advice personalized financial that best suits to your personal situation.

We design investment proposals within a global universe of assets with the vehicles that best suit your needs. For this, we have access to a wide range of our own investment funds and international managers that allow us to develop an investment strategy tailored to your needs, through managed and advised portfolios.

We have a team specialized in searching, analyzing and selecting, in a global universe of investment funds, those products that best suit each profile of customer and the market situation.

You do not have to have a great fortune to properly manage an estate, but you must know some basic principles to avoid mistakes and save a lot of trouble.

The patrimony of a person is not only formed by his assets and rights, but also by the debts. It should not be confused with the concept of fortune and we must be clear that it does not feed itself, so it is necessary to manage it. First, because Hacienda is always there to take the bill. And then there are the constant legislative changes, in addition to the commissions that banks charge and the effect of inflation, that often goes unnoticed but that can diminish

great patrimonies. Therefore, it never hurts to know the keys to manage your assets well.

Who is interested in managing your assets?

It interests everyone, regardless of the money you have. But naturally, the higher the capital, the more professional help you will need. For example, an average saver with 50,000 euros will probably only need to use an advisor. But if you talk about assets that are around 300,000 euros, then it already requires comprehensive management by a professional manager. In either case, the adviser or the manager must analyze the needs the client and define an investment policy (conservative, moderate, aggressive) based on the defined profitability objectives.

How does age influence?

-About 25 and 35 years old. Almost all decisions are guided by the purchase of a home or the savings for it. But you can also think about placing the first savings on the stock market prudence, in some investment fund or a deposit.

-About 35 and 45 years old. It is the stage of patrimonial maturity. Decisions should be aimed at investing in more ambitious funds or in the stock market but in a more daring way. Other habitual decisions go through the purchase of a second home, the opening of a pension plan or even the participation in some company.

-About 45 and 55 years old. It's the period in which a heritage is usually developed and consolidated. The interesting thing here is to start making decisions taking retirement on the horizon, but without leaving aside the diversification.

-About 55 and 65 years old. Perhaps the

most active stage. Retirement must be a priority objective. There must be extra expenses (for example, lending money to children for become independent) or with extra income (reception of an inheritance, which involves taking over the goods but also pay some expenses).

-Retirement. The fundamental thing is to maintain a conservative profile, calibrate the fiscal weight of the capital gains and decide what assets it will transmit to its heirs.

Who to turn to manage a heritage?

The most advisable option is to put in the hands of management companies such as A2CAPITAL, individuals or legal entities that

provide investment advisory services.

In the face of clients, in many cases they are more flexible while it is true that some only accept high capital (above of 300,000 euros) others advise clients with much less funds. In these cases, what is paid is the advice, the advice. For example, companies like

perspective. If they invest in the stock market, they usually do so in solid investments and with long term profits. If they buy fixed income, they go to longer terms, that generate more interests. And they usually try with the corporate fixed income or issued by the companies.

A2CAPITAL can make an investment portfolio in a timely manner and invoice the hours used. Or collect a percentage based on the capital invested for continued advice.

- Aggressive. Those who take the most risk. They tend to be in equities and in international companies.

What profile corresponds?

-Conservative. They are the people who do not like to risk, who do not sleep well if they have something invested in products of certain risk. Normally, they will be more comfortable with the prospect of long-term growth, guaranteed funds, deposits or fixed income, although with the latter it is also possible to lose money.

-Moderate. For investors who risk something more in exchange for a higher return

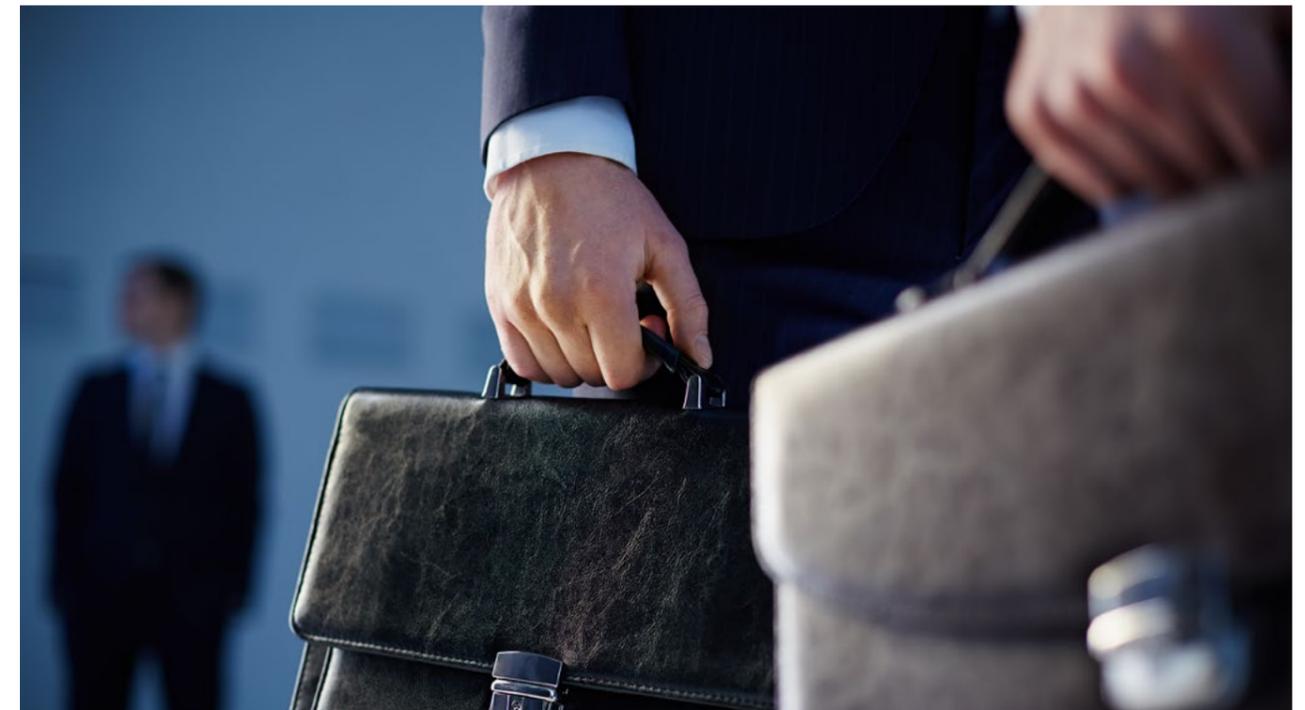

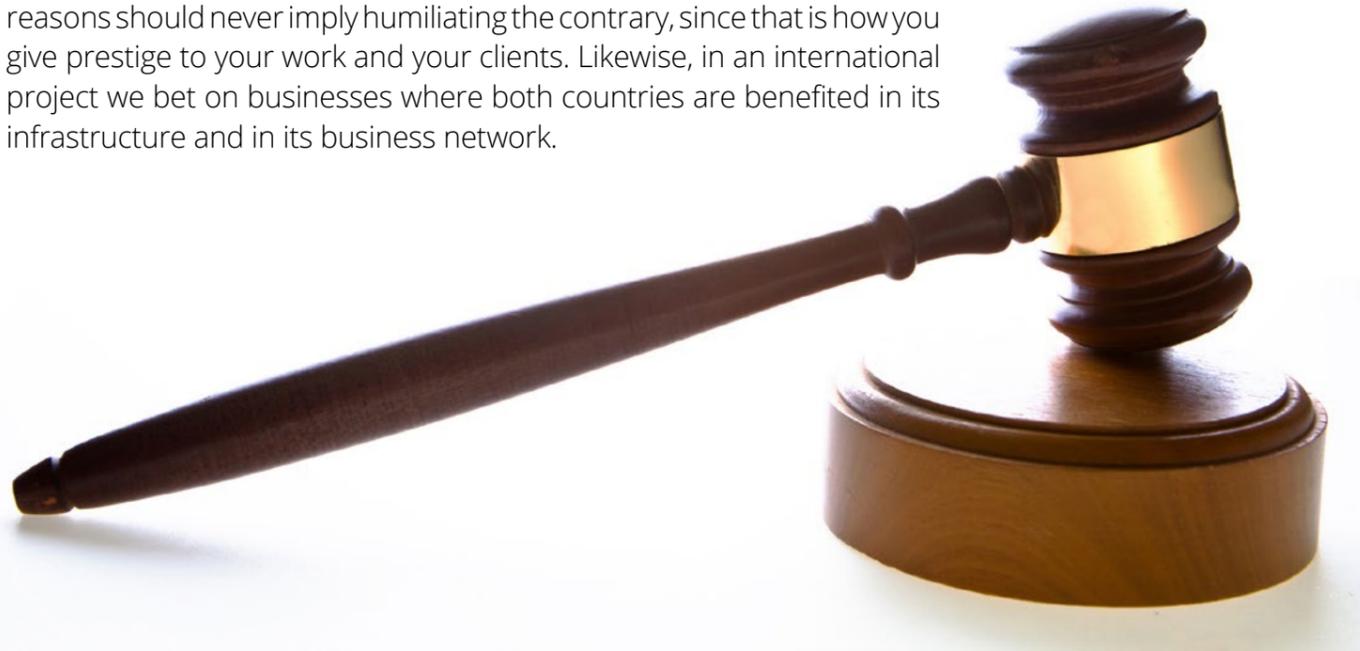

What is tax planning?

Finally, you should never leave the Treasury aside. All well-managed assets must be fiscally efficient. This does not mean avoiding taxes but minimizing the amounts to be paid. Everything has fiscal significance, from the opening of a deposit to investment in real estate, funds, life insurance or pension plans. Advisors and managers must provide the client a previous plan that allows to know what is the fiscal cost of an estate and the best way to minimize it. There are many bonuses, deductions or exemptions that some products they have and others do not.

Among other multiple advantages and services, in A2 we can offer you:

Our firm takes care above all the reputation of its clients, being the inspiring principle even when litigating. Exposing and defending your reasons should never imply humiliating the contrary, since that is how you give prestige to your work and your clients. Likewise, in an international project we bet on businesses where both countries are benefited in its infrastructure and in its business network.

INTERNATIONAL CONSULTING

Previous studies of fiscal studies from both countries and social company form

Because it's better to prevent any injuries instead of resolving them, we study the most appropriate way so the fiscal way will be most appropriate but not illegal. Taking care of company prestige and reputation of the company.

Company constitutions, opening accounts and searching for headquarters

To facilitate the business to undertake, we advise on the most practical

issues, facilitating the landing and development of the company abroad.

Advice on the Law on the Prevention of Money Laundering and its incidence beyond borders.

In order to comply with the demanding international noramtriva, we prepare the necessary documents, including the necessary international apostilles, avoiding a problem that would suspend the operations for several months.

Carry out the obligations with the Treasury, and Administration of both countries, accounting compliance, taxes and labor

On a day-to-day basis, and so that you only have to worry about your business idea, we fulfill your needs with the public administrations on both sides of the border.

Advice for obtaining visas and residence permits, facilitating the arrival of workers from both borders

Being able to count on your best assets on a personal level is essential for the success beyond your borders.

Review and drafting of contracts

We review the clauses and write the necessary ones for your security in all

the necessary contracts.

Adaptation of Compliance, Code of good behavior, compliance in Protection of Personal Data International

To avoid the reputational damage that can be caused by an employee, a supplier, or counselor, these matters are essential, ensuring the good image and good work of the company.

ASSOCIATED SECTORS OF THE GROUP

A2 is a group formed by numerous companies and partners with a long experience in the international investment sector, which allows us to offer our partners / clients a wide variety of products that adapt to the needs and particular tastes of each investor.

ENERGY

A safe value with constant profitability

A2 has as partners some of the leading Spanish companies specializing in the execution of turnkey projects for all types of electric power generation facilities, from gas turbine power plants to conventional thermal power plants, through solar thermal power plants. These carry out the entire process of the projects, including

their management, as well as the engineering, supplies, construction, assembly, start-up and operation and maintenance of the plants.

With an international experience of almost 20 years, they have executed under the EPC (Engineering, Procurement and Construction)

modality more than 50 plants in different countries of Europe, Latin America and Africa, with more than 22.00 MW of installed power.

Since the beginning of its activity in the field of large energy projects, A2 has maintained the support of the main world technologists in the field of electric generation with gas turbines, participating in different projects

with General Eléctric, Alstom Power, Siemens Westinghouse, Mitsubishi Heavy Industries and Pratt & Whitney.

With permanent offices in the main countries in Latin America, Europe and Asia in which we operate, we have a stable structure close to the projects, which translates into a more

effective management of them throughout their development.

KEY ON HAND PROJECTS

- Thermal power plants with gas turbine (open cycle and combined cycle)
- Conventional thermal power stations
- Desulfurization and denitrification
- Thermosolar plants
- Biomass plants
- Cogeneration plants
- Photovoltaic plants
- Wind farms

SUPPLY RANGE

- Project management
- Basic and detailed engineering
- Manufacturing (HRSG, mechanical components, storage tanks)
- Supply of systems (mechanical and electric)
- Assembly (electro mechanics and complete)
- Start-up (start-up of the plant, operation of the plant to PAC)
- Civil (land preparation, foundations, buildings, marine-fluvial works)
- O & M (Operation and Maintenance of the plant)
- Purchase of main equipment of photovoltaic plants
- Evacuation infrastructure to the network

We are specialized in the turnkey execution of projects in the areas of mineral processing and handling of solid bulk (handling). With more than 40 years of experience in these activities and a broad list of references in international markets, the company has its own technology and is capable of developing all the phases of the projects, from engineering to commissioning and operation of the facilities built under the EPC modality.

Mining

We have an important know-how in the mining area thanks to an experience of more than 150 years operating own mines and processing plants, which has allowed it to become a company specialized in the turnkey execution of this type of facility.

The company covers all phases of the projects: feasibility studies, basic and detail engineering, supply of equipment, assembly, commissioning and commissioning, as well as assisted operation and maintenance of the installation.

For iron ore processing facilities we offer solutions tailored to the needs of its customers, both in design and execution conditions, including the following activities:

- Crushing
- Grinding
- Classification
- Magnetic Separation
- Gravity
- Flotation
- Leach heap
- Deposit
- Deposition of Waste

The collaboration with world-class technologists allows you to develop processing facilities for other minerals (gold, copper, etc.)

A team of multidisciplinary and highly qualified professionals allows to cover all the disciplines that require this type of projects: Mechanical, Structural, Civil, Electrical, Control and Instrumentation.

Handling

In the area of Handling or handling of solid bulk, we have an experience of more than 40 years and an extensive list of references of projects executed in numerous countries, which together with important technological developments in this field allows to optimize solutions adapted to the demands of each client.

The company executes with its own means all the phases of the projects, from feasibility studies, through the conceptual development of basic engineering, detail engineering, supply of equipment, assembly, commissioning and commissioning, to assisted operation and maintenance for complete projects or turnkey as a particular way for the equipment that integrates these facilities.

Focusing on the large capacities of transport and storage, the developed design has achieved high levels of technology, giving leading solutions to problems such as material degradation, fines formation, dust pollution, etc. Between the systems offered frequently in projects key in hand they emphasize:

- Port terminals of bulk.
- Homogenization patios.

- Mine patios for storage

All of them incorporate leading designs of:

- Port machines: unloaders and wheel loaders
- Chain conveyors.
- Long-distance park machines: stacker, bucket pickers and combined stacker-pickers.
- Other stacker / pick-up machines: bridge-type pickers, for circular stacks, side pickers.
- Train loading and unloading stations.

Regarding the types of bulk in which the company has recognized experience, the most significant are: iron ore and all its derivatives, coal, cement, grain and sulphates.

In addition, we have sufficient resources to design and adapt the equipment to any type of dry material in bulk.

The turnkey execution of different types of installations for the Oil & Gas sector is one of our specialties. The company has developed projects in different countries for relevant multinational petrochemical groups, highlighting their references in Spain, Mexico, Brazil, Peru, Costa Rica, Belarus, Argentina and Jordan, among others. The storage of fuels is one of the main specialties of the group thanks to the extensive experience acquired in this field.

Turnkey projects (EPC)

We work as a turnkey project contractor (EPC), being able to manage and develop them from the feasibility study, through basic engineering, detail engineering, supply of equipment and materials, construction, supervision, commissioning and commissioning, until the

assisted operation of the plant.

The company has several subsidiaries specialized in providing the services and components necessary for the development of these projects, thus ensuring a better quality and a strict delivery deadline.

This grouping of engineering, manufacturing and assembly resources with references in a great variety of projects and countries, with specialized teams in all the disciplines of a project and with the ISO 9001 and 1400 certifications, allows us to offer the necessary experience and capacity to design and build a variety of Oil & Gas facilities and plants.

The permanent delegations of the company in India, China, Brazil, Mexico, Venezuela and the Middle East lend the necessary support for the correct execution of large projects in this business area.

Storage of fuels

We are associated with some of the leading Spanish specialists in the storage of fuels, both liquids and gases, executing turnkey projects for both complete installations and individual equipment of different characteristics.

We develop the following activities:

- Design and construction of gas tanks OF Natural Liquid (LNG).
- Design and construction of vertical and spherical storage tanks.
- Turnkey design and construction of hydrocarbon storage plants.
- Operation and Maintenance in refineries and storage plants.

The company has increased its international projection executing “turnkey” projects in different countries of the world, highlighting those contracted in the US, Costa Rica, Peru, Bolivia, Colombia, Cyprus and Turkmenistan.

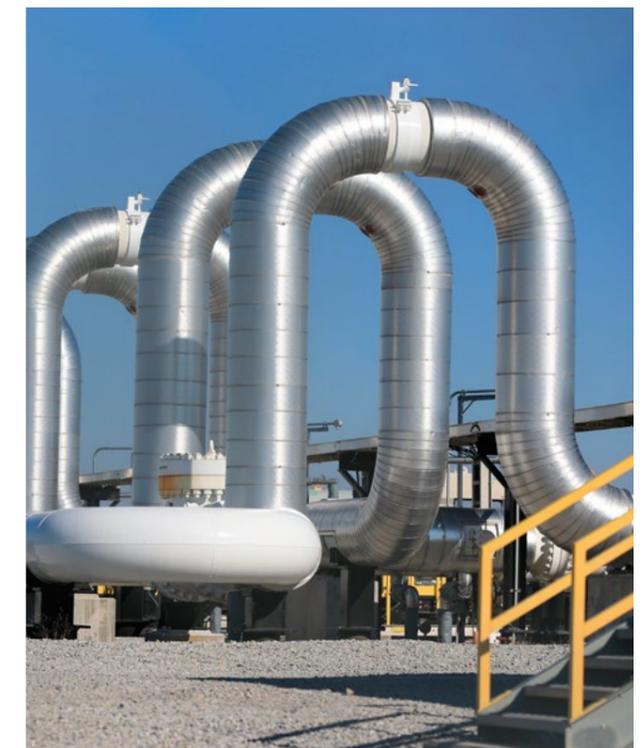

We have increased its activity in the execution turnkey of cryogenic tanks of liquefied natural gas (LNG) and its facilities, being leaders in the development of this type of facilities. Likewise, the construction of turnkey hydrocarbon storage plants is maintained, both in Spain

and in international markets. In recent years, the storage capacity built exceeds one million cubic meters.

We also carry out maintenance and renovation activities in the main refineries in Spain.

Manufacturing

We have partners among some of the great international specialists in the design and manufacture of large pressure equipment.

Thanks to the experience acquired during more than 40 years and to an intense R + D + i work, our partners have consolidated worldwide as one of the main manufacturers in their sector.

In addition, it has an extensive list of references in strong alloy reactors, coke chambers, process units and FCCs, among other equipment for the petrochemical and oil & gas industry.

INDUSTRIAL FACILITIES

The line of Services of A2, integrated by its subsidiaries, is specialized in different disciplines related to the assembly, start-up and operation and maintenance of energy and industrial facilities, being one of the main references in the Spanish market and with a long experience and growing international presence.

It also develops turnkey projects for biomass and cogeneration plants, pellet plants, logistic

Specialized Services, and encompasses the activities of electromechanical assemblies, thermal, cryogenic and acoustic asilamientos, start-up, operation and maintenance of power generation plants and industrial facilities.

Leading company in the assembly and revision of turbogenerators and auxiliary equipment in power generation plants, as well as rotating equipment in general in all types of industries.

storage facilities, as well as assembly, operation and maintenance services for wind farms.

A team of professionals highly specialized in all areas that require services to the industry, a first-class technical equipment and the constant concern for the most advanced training of their workers are the main guarantees in the area of services for energy and industrial installations.

Operations and Assemblies

Operations and Assemblies is a subsidiary of the group that falls within the segment of

It has a training center that has real equipment, including a 160 MW steam turbine that allows reproducing complex situations and interventions and real cases.

Manufacture of equipment goods

We have specialized workshops in the manufacture of equipment goods for different industrial sectors, located in Asturias (North of Spain) and with a long export experience in which we execute:

- Design and manufacture of pressure equipment
- Track and cross devices
- Equipment for mining and infrastructure

Control Systems for Infrastructure

We have created a series of specific solutions for each of the following areas of action:

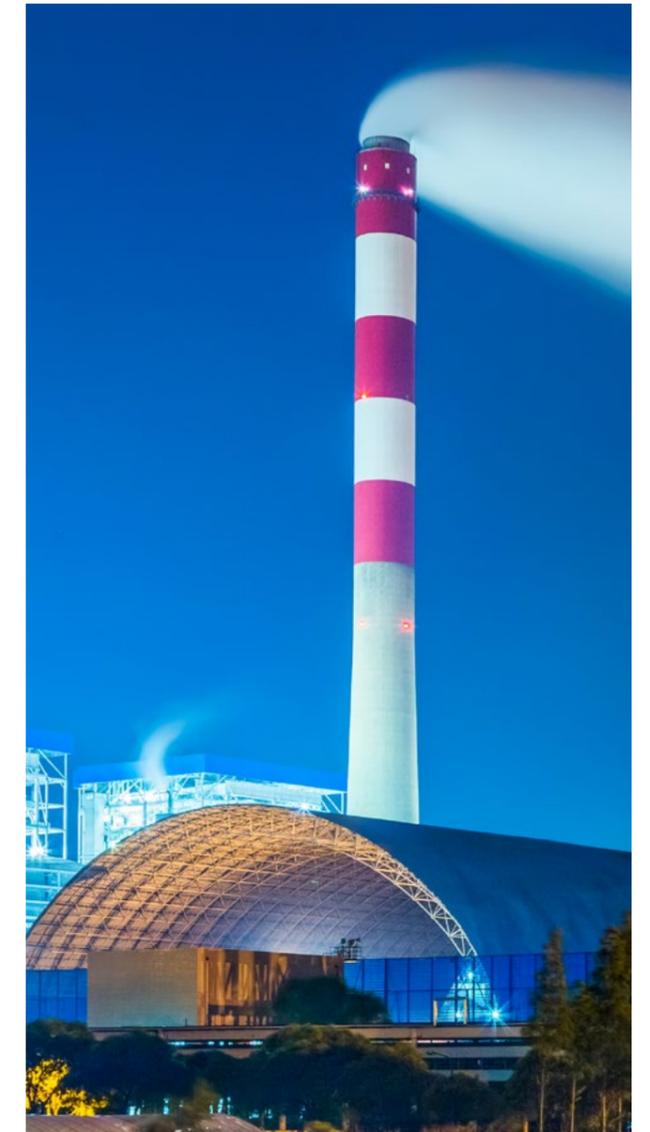

-Energy

Our systems, designed for intelligent management (Smart Grids), provide information to guarantee a better management of electrical energy, organized and treated according to the needs of our customers

-Environment

We favor a better management of natural resources.

We are present in all phases of the water cycle, in air quality and waste treatment.

-Transport

We provide solutions that guarantee the electrical supply of the railway network.

We are present in the traction substations, in the auxiliary feeding systems and in the traffic control and operation centers.

We develop solutions based on our own control, supervision and measurement products such as SHERPA S, substation control and automation systems, remote stations, data acquisition equipment and measurement concentrators.

FEEDING

AGRICULTURE & LIVESTOCK

Spain's location in Europe and climate gives it an advantage in the development of the agricultural sector production. With its semi-arid climate producing very cold temperatures in the winter months and very high temperatures in the summer months, Spain is perfectly suited to produce a very wide range of classically Mediterranean products. With Spain's agricultural sector mainly focused on the export market, it has become a key exporter in many products consumed around the world.

Olive oil

Spain is the largest producer of olive oil worldwide, with around 300m olive trees in an area of 2m hectares. Production has been steadily increasing, with 2011/12 reaching a record high of 1.6m tonnes (up from 1.4m tonnes in 2010/11). In the EU as a whole, annual production is around 2.4m tonnes, with Spain accounting for 66%, followed by Italy at 18% and Greece at 12%. Spain is also the leading exporter of olive oil globally, and exports have risen in line with production. Most of the olive oil production is based in the region of Andalusia in southern Spain (80%), making this regional market the main driver in Spain, followed by Castile (7%).

Citrus Fruits

Spain is the largest producer of citrus fruits in the EU and is the leading exporter of citrus fruits to the world, comprising of oranges, mandarins and lemons. Spain produces around 5.7m tonnes of citrus fruit annually and has a planted area of around 330,900

hectares. Around 60% of the volume is produced in Valencia in east Spain. Oranges are the most common citrus planted in Spain (52%) followed by mandarins (38%).

Vegetables

Spain has become one of the leaders in horticultural exports globally. The area planted with vegetables is around 330,000 hectares, with most of the land (95%) having some form of irrigation. The most important vegetables are tomatoes (17% of total area), lettuce (10%) and melons (9%). The vast

majority of exports are to other EU countries due to the shelf-life of this produce, and this is also the case in the citrus market. Most of the production comes from Andalucía, Murcia, Valencia, Catalonia and the Canary Islands.

Livestock

The principal cattle areas were in the north, the northwest, and, to a lesser degree, in Extremadura, Andalusia, the Rio Duero Basin, and the Murcia-Valencia lowlands. These regions provided the suitable pastures that were available only in areas with humid climates or with irrigated land. Spain has 6 million cattle, including 2.9 million dairy cows. Spain's sheep population remained almost unchanged at

about 25 million. Sheep rearing predominated in central Spain and the Ebro Basin. Goats were kept in much the same area, but they were more prevalent in the higher, less grassy elevations because they can survive on poorer pasture.

In A2 we can offer our customers and investors a wide range of food for export to countries of destination, among which we can highlight the following:

Fresh fruits and vegetables

We can supply virtually any product from almost any origin, northern or southern hemisphere, depending on the season.

Example: At this moment, we are starting the Aguacates de España campaign and we have finished the Mangos campaign, now we are starting the Mangos campaign of the southern hemisphere, origin Peru, Colombia, Costa Rica...

Like all Gourmet products, we transport them by air, if necessary, we could send some products directly from countries of origin to final destination, saving on transportation.

Processed gourmet

We can offer Olive Oil; Olives and Pickles; Cafes, Teas and Infusions; Chocolates and Sweets; Processed and Precooked Terneyay Lamb Meats (HALAL CERTIFICATE); 100% Natural Juices, Refrigerated and Frozen Juices; Canned Vegetables, Vegetables and Fruits; etc...

Won

We have contacts that are exporting cattle, sheep, goats, live beef to prime at destination or already bred to slaughter at destination.

Shipping by sea there are a lot of waste, but air shipments are already being made to countries like Palestine or Kuwait.

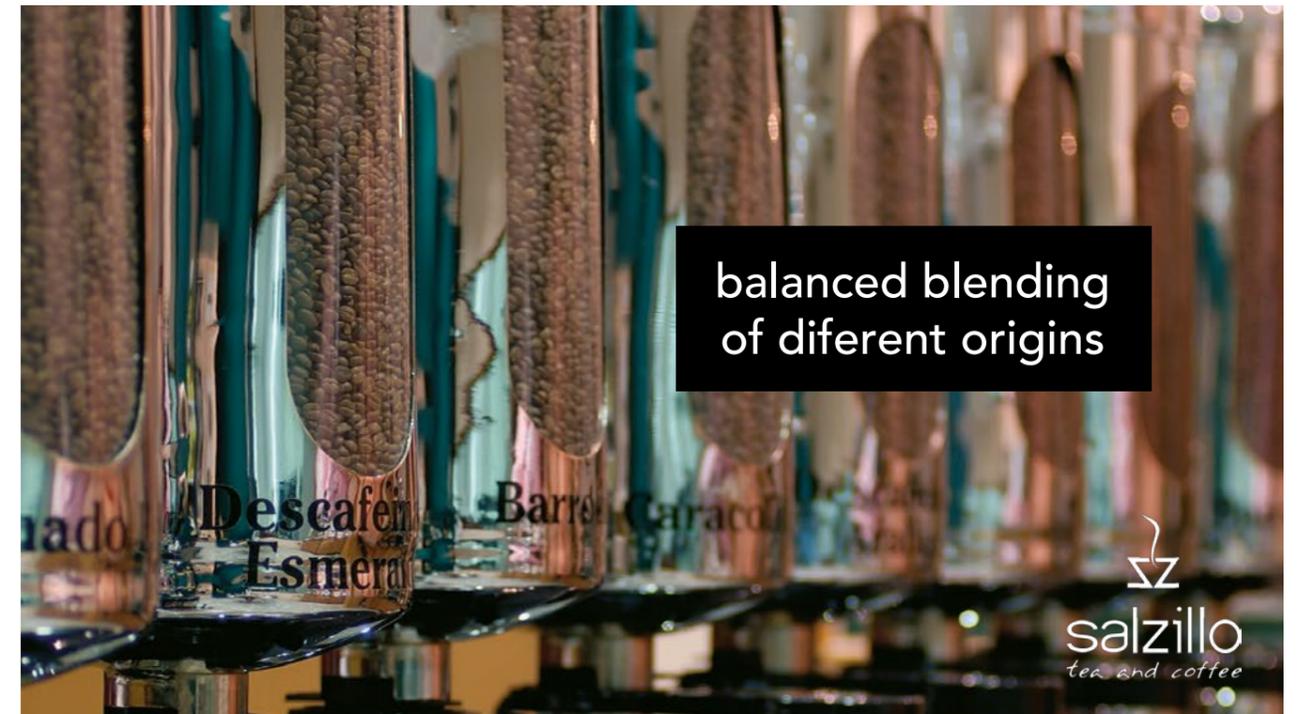

Farming

We are partners of companies that are marketing and installing greenhouses, automated irrigation systems with low water consumption and Bio fertilizers in the Middle East, with continuous technical advice.

to obtain the best espresso

Barrocco

At the beginning of the 90s, the city of Barcelona was bursting with specialised coffee shops, a trend which gradually spread to the rest of the cities in Spain.

By choosing the most adequate coffee beans from among a selective range of Arabic coffees allows one to create different high quality blends, these will bring to each cup the necessary magic to seduce and enchant coffee lovers.

Offering your customers a high quality blend, guarantees success.

Baroque: An artistic style started in Italy in the 16th century.

Barrocco: A smooth, aromatic coffee which is full-bodied and creamy. A coffee achieved by blending an original selection of four sublime coffees from the best plantations in Ethiopia, Puerto Rico, Columbia and Papua New Guinea.

Offer your clients this original blend that was created here in Salzillo tea and coffee for the delight of all espresso lovers.

MARACANÁ

DO CAFÉ

From the Minas Gerais region, in the heart of the Cerrado, Patrocinio, we have selected four exquisite coffees from small plantations to blend with two other coffees of excellent origin from Puerto Rico and Ethiopia.

We have blended them in precise proportions to obtain a surprising result: a creamy balanced, perfumed cup of coffee, which has the fine citric aromas of China and a caramelized taste of tropical fruits.

CONSTRUCTION

A2 counts among its partners some of the most reputable engineering, architecture and construction companies in the Spanish and European markets, being able to meet all the needs of our customers and partners.

We use the highest standards in these areas and are always looking for ways to make them more functional, smart and convenient.

Our extensive experience allows us to offer maximum qualities by adjusting to budgets, thanks to a team of professionals with a long career in each of their respective departments.

Public work

We have more than 40 years in the execution

of public works constituting us in a reference for the sector.

Earth movements

For this type of work we have the necessary infrastructure, machinery of the best quality and specialized technical advice to perform various jobs in any type of conditions and with the guarantee of a solid experience.

Network installation

We specialize in the installation of pipe and valves, load tests and civil works necessary for

commissioning of all kinds of public service networks.

Pumping stations

We are responsible for more than 80% of the existing pumping facilities in Altea, thus combining extensive experience in assembly and maintenance of this type of station.

Asphalts and pavements

We perform all kinds of paving works, both indoors and outdoors, we make asphalts, concretes printed and trowelled, extended slurry, paving slabs, terrazzo and tile in general.

Deposits and treatment plants

We make all kinds of reinforced concrete structures in situ and prefabricated, we are

specialists among others in regulating tanks of drinking water and sewage treatment plants.

Edification

We have experience in building works for both the administration and private entities.

Electrical installations

We use the infrastructure and specialized machinery as well as the professionals suitable for the development of the projects of electrical installations and public lighting that have become one of our specialties.

Sports facilities

We execute all kinds of sports facilities whether paddle tennis courts, swimming pools, football fields on artificial turf and sports parks in general.

Gardens

We carry out all kinds of gardening works, and installation of irrigation networks, we have

qualified personnel specialized in maintenance and conservation of all kinds of species.

Street furniture

We execute all types of civil works and installation of urban furniture, playgrounds and underground containers for garbage.

Topography

Our technical department has a topography office that provides services internal and external, is equipped with the latest technologies, in total stations, optical levels and laser.

Technical advice

We provide technical advice in various fields of construction, we develop technical projects for the administration and promoter companies as well as studies and proposals for public competitions.

OUR SYSTEM

We study the characteristics of the area, making a detailed planning of all the necessary resources to carry out the work from beginning to end. We optimize the means and so that the final price is in accordance with the standards of the market.

PLANNING

We have our own accounting department specialized in building, essential for operations to be executed correctly. They are also in charge of studying what professionals and resources are going to be necessary.

PHILOSOPHY

The buildings are more than a mere combination of materials. They are areas where we meet with the family, we work, where we inspire and get the best out of ourselves and others.

CIVIL and STRUCTURAL ENGINEERING

SILGA is a consulting company specialized in engineering projects, mainly focused on **civil, industrial and building structures**.

SILGA was established in **1989** around a small but highly specialized group of professionals with experience in structural projects.

Since then, SILGA has grown both in human and material resources in order to meet the clients' requirements with the highest level of excellence. Projects have included bridges, industrial structures and building facilities.

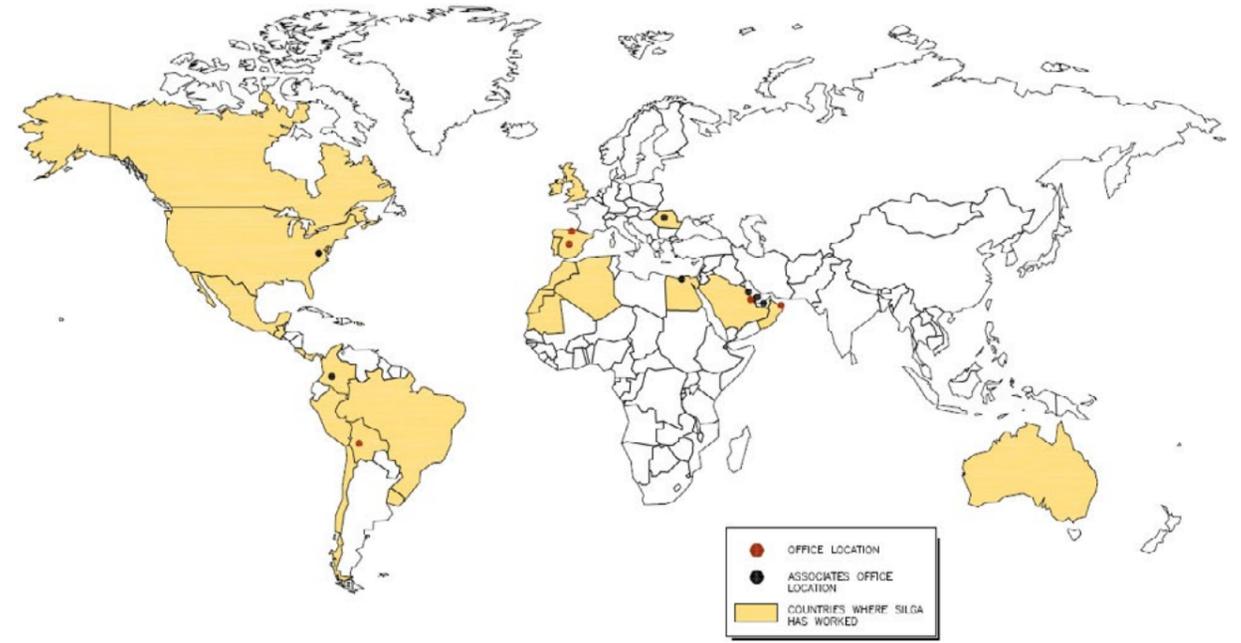

The areas where SILGA has been providing consultancy services are classified in the following groups:

- Design
- Project auditing and review
- On site assistance to construction
- Structural inspection, evaluation and repair

SILGA has worked in over 20 countries worldwide. The main offices are in **Spain**, and it is commercially registered in **Oman, Bahrain and Bolivia**, and association or agentship agreements in **USA, Colombia, Romania, Saudi Arabia, Egypt, UAE, and Qatar**

DISCIPLINES COVERED

SILGA is a company specialized in **structures**, and as such the disciplines directly covered are the following:

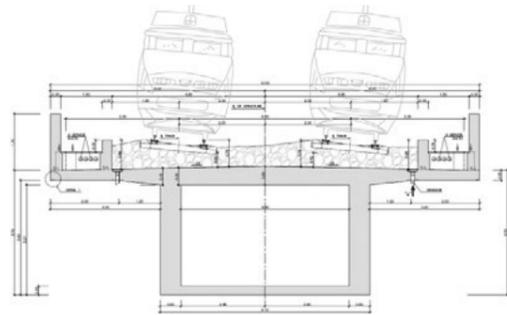

- Structural Design (buildings, infrastructure works, bridges)
- Structural Project auditing and review (including full recalculation and design certificates)
- On site assistance to construction
- Structural inspection, evaluation and repair

AJ3 is an architectural and urban management company, made up of a highly qualified and specialised team of professionals; a team of individuals with ample experience in design, management and planning.

The services that AJ3 offers to its clients (private and public) include the following:

- Global Management of design projects.
- Building projects , Residential, Industrial, Tertiary.
- Refurbishment
- Landscaping

The AJ3 team is headed by the architect and urban planner Pablo Estefania, who after working in the Basque government for several years, founded the company in January 1998. It is comprised of a group of professionals that include architects, geographers, draftsmen and office clerks, with ample experience in these types of processes and actions.

Our track record, experience and the synergies we have created with various professional teams have enabled us to develop projects of great importance both technically and financially.

Here you will find some of our most important projects.

AJ3 Solozarre-Bakio 120 Residential Complex

This housing development, promoted by the private sector, is located in the village of Bakio, 29 km away from the urban centre of Bilbao; completing the existing urban fabric in the town, and providing the necessary infrastructures and resources for attending, not only the demands of the population on this new development, but also to alleviate certain existing deficiencies in the municipality.

Therefore, the proposal was promoted with the aim of creating an environment of high quality, where 78.5% of its surface area is intended for public use, with public sports facilities covering an area of 28,740 square meters; and covers the design and construction of the whole urbanization, as well as 120 houses in different typologies, urban parks, gardens and equipments.

Although the Spanish legislation stipulates that the 70% of the housing must be 'VPO' subsidized housing, at the level of design, all of them were considered with same quality as the non regulated dwellings.

All the buildings include an underground garage level, and due the nature of the terrain, for the construction of the blocks it was necessary to use pilings over 30 meters depth.

- Client: Moldis Echarro (Private Promoter)
- 2008 – 2011
- Surface area: 79,298 sqm
- Public surface area: 62,272 sqm
- Residential buildable area: 15,810 sqm
- Number of houses: 120
- Urban development cost: 3,865,423 €
- Building construction cost: 19,762,650 €

AJ3 **Torrelavega**
116 Residential Complex

This proposal develops a new expansion in the residential area of the city of Torrelavega. Initially, it was a more ambitious project, but with the arrival of the crisis in Europe many of the initial proposals had to be postponed or just reconsidered.

Anyhow, AJ3 was in charge for designing the Master Plan of the area and, subsequently, a complex with three residential buildings and garages, with recreational areas for private use.

All the buildings include an underground garage level, and due the nature of the terrain, for the construction of the blocks it was necessary to use pilings over 35 meters depth.

- Client: Torrela 2005 S.L. (Private Promoter)
- 2008-2010
- Total urban development area: 297,418.44 sqm
- Total residential buildable area proposed: 109,905.70 sqm
- Total number of houses proposed: 944
- Residential buildable area: 16,162.82 sqm
- Number of houses built: 116
- Cost of urbanisation works: 895,697.58 €
- Building construction built cost: 6,893,016.54 €

AJ3 **Torrelavega**
116 Residential Complex

AJ3 **Torrelavega**
116 Residential Complex

This proposal integrate into the existing urban fabric of the town, a new housing development in the outsides of the town of mungia, 20 km away from Bilbao. The site covers a surface area of 24,38 Hectares, and this new Master plan provides the possibility of building an urbanization which will incorporate 153 single houses and 284 social dwellings.

AJ3 developed the Master plan and the detail project of the urbanization, integrating the infrastructures and necessary resources to answer the needs of the population of the new development.

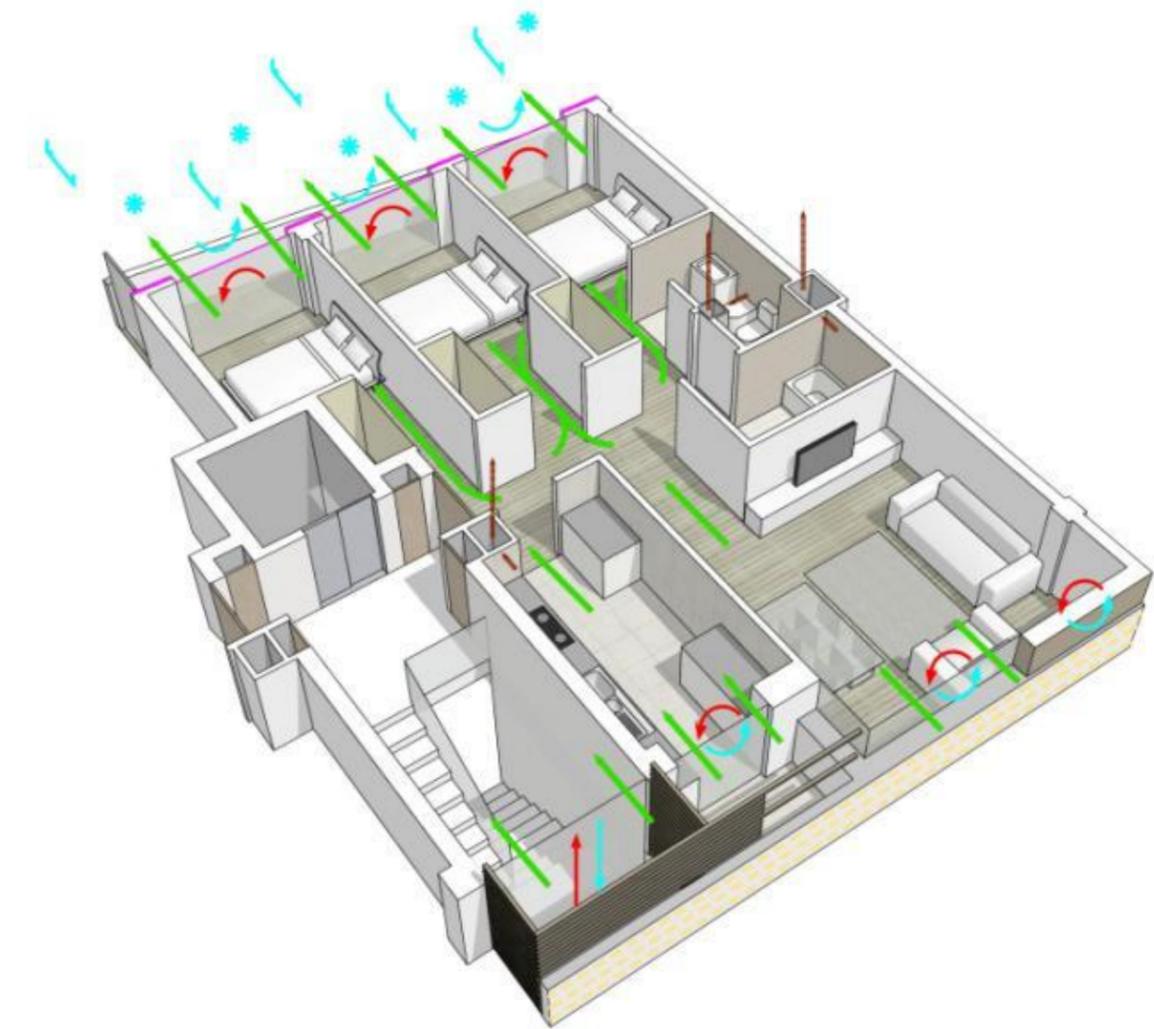

Later, AJ3 was asked to prepare a proposal for some of the social dwellings in the site, and these were designed applying criteria of sustainability and eco design, such as rainwater management, passive measures in order to keep the heat balance of the buildings, environmental quality (cross ventilation, etc), heating of the water through solar panels, etc...

- Client: Private Promoter
- Year: 2012
- Surface Area: 243,800.16 sqm
- Public Surface Area: 80,651.24 sqm
- Residential Buildable Area: 75,415.00 sqm
- Number of houses: 153 houses & 284 apartments
- Urban Development Cost: 8,753,329.84 €

Ecodesign measures:

- Solar Energy harvesting
- Environmental quality – Ventilation
- Rainwater recovery system
- Passive measures – Heat balance
